

LIGHTING & COMMUNICATION

- ▶ Compact "traffic style" yellow polypropylene light will not rust, pit or corrode
- ▶ Shallow depth of unit prevents damage from backing truck
- ▶ Integral eyebrow-type sun visors for improved visibility
- ▶ Universal red and green lights provide direction to drivers and loading dock personnel
- ▶ Available in two unit sets (for mounting on opposite sides of door)

TOGGLE LIGHTS

LIGHTING & COMMUNICATION

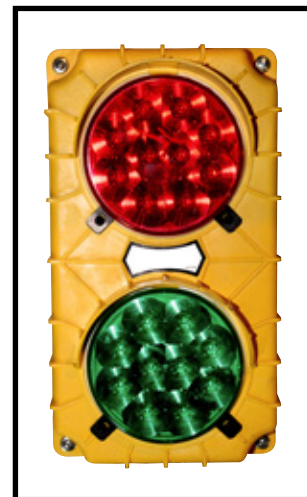

The outside lights can be paired with right reading and reverse reading signs to provide more communication with truck drivers.

Toggle Lights provide communication between truck drivers and loading dock personnel as to the safety status of the loading and unloading process. The system utilizes two units - one outside of the loading dock and one located on the inside.

The system is controlled by a toggle switch mounted on the inside light. The outside light flashes red while the inside light is green. This tells drivers not to move or pull away from the loading dock until loading and unloading is complete.

When the loading process is complete, the dock attendant then flips the toggle switch to change the lights - red inside and green outside. The driver is then free to pull away from the dock.

Technical Specifications

Housing	Safety Yellow
Power Source	12 or 24 volt DC operation or 115 volt AC operation
Lens Diameter	4 1/4"
Dimensions	11 3/8" H x 6 3/8" W x 3 3/4" D
Shipping Weight	2 lbs. per unit
