

- ▶ Equipped with pre-drilled mounting holes to accommodate a number of different photo eyes and entrapment protection devices
- ▶ Designed to withstand light fork truck and pallet impact while protecting the overhead door track from damage
- ▶ Powder coated safety-yellow makes it easy for the fork truck operator to identify the edge of the door opening
- ▶ Unit mounts to both the floor and to the wall providing extra strength and durability
- ▶ Top taper helps prevent finger pinching by pushing the hand away from the unit while the door is closing
- ▶ Unit is pre-drilled. Simply set the unit around the door track, snug it up to the wall and anchor in place
- ▶ Works on both mechanical and automatic doors

TRACK GUARD LS

PROTECTIVE SYSTEMS

Install a Limit Switch on your Track Guard LS

Track Guard LS from Allied Solutions is equipped with pre-drilled mounting holes to accommodate a number of different Limit Switches, such as Photo Eyes from LiftMaster® pictured above. These sensors ensure your loading dock equipment operates through the correct sequence of operation, by detecting when the overhead door opens and closes. Limit Switches also detect any objects that may be in the operating zone of the overhead door. This helps prevent any accidents that may occur from the overhead door closing prematurely.

Track Guard LS was designed with the protection of the door track in mind. Each unit is powder coated safety yellow making it easier for the fork truck operator to see. The heavy gauge steel construction wraps around the bottom of the door track protecting it from forklift, cargo, or vehicle damage that may occur while loading or unloading a truck.

Acting as a barrier from impacts, the track guard uses both the wall and the floor for support. The Track Guard LS deflects impacts away from the door track protecting it from expensive damage and costly repair time. Each Track Guard LS has a one year warranty.
